## Interview Summary

Application No.

10/675,369

Applicant(s)

WILDFEUER ET AL.

Examiner

Phuongchau Ba Nguyen

Art Unit

2616

All participants (applicant, applicant's representative, PTO personnel):

(1) Phuongchau Ba Nguyen.

(3) \_\_\_\_\_.

(2) Keiko Ichiye.

(4) \_\_\_\_\_.

Date of Interview: 03 December 2007.

Type: a) ☒ Telephonic b) ☐ Video Conference  
c) ☐ Personal [copy given to: 1) ☐ applicant 2) ☐ applicant's representative]

Exhibit shown or demonstration conducted: d) ☐ Yes e) ☒ No.

If Yes, brief description: \_\_\_\_\_.

Claim(s) discussed: 1, 7, 13, 19 and 20.

Identification of prior art discussed: Robert (6,327,276), Laursen (US2003/0002481A1).

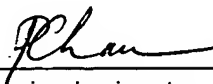

Agreement with respect to the claims f) ☐ was reached. g) ☒ was not reached. h) ☐ N/A.

Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: See Continuation Sheet.

(A fuller description, if necessary, and a copy of the amendments which the examiner agreed would render the claims allowable, if available, must be attached. Also, where no copy of the amendments that would render the claims allowable is available, a summary thereof must be attached.)

THE FORMAL WRITTEN REPLY TO THE LAST OFFICE ACTION MUST INCLUDE THE SUBSTANCE OF THE INTERVIEW. (See MPEP Section 713.04). If a reply to the last Office action has already been filed, APPLICANT IS GIVEN A NON-EXTENDABLE PERIOD OF THE LONGER OF ONE MONTH OR THIRTY DAYS FROM THIS INTERVIEW DATE, OR THE MAILING DATE OF THIS INTERVIEW SUMMARY FORM, WHICHEVER IS LATER, TO FILE A STATEMENT OF THE SUBSTANCE OF THE INTERVIEW. See Summary of Record of Interview requirements on reverse side or on attached sheet.

Examiner Note: You must sign this form unless it is an Attachment to a signed Office action.

  
Examiner's signature, if required

Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: First, the proposed claims were not clear what is meant by the function  $f$ ? although the specification merely disclosed an example of determining a metric rating  $y$  using function  $f$ , nowhere in the original disclosure disclosed what is the function  $f$ . Second, by amended claims 1, 7, 13, 19 as proposed in the draft filed 11-26-7, applicant had overcome the previous art rejections issued in 10-5-7. Third, by amended claim 13 as proposed in the draft filed 11-26-7, applicant had overcome the 101 rejection.

Dear Sir:

**DRAFT AMENDMENT**

The following amendments are for discussion purposes only.

ATTORNEY'S DOCKET NO.  
062891.1167

PATENT APPLICATION  
10/675,369

2

**In the Claims**

1. (Currently Amended) A method for managing a multicast conference call, comprising:

receiving a plurality of signals at a local endpoint participating in a multicast conference call among the local endpoint and one or more remote endpoints, the plurality of signals comprising a local signal and one or more remote signals, the local signal associated with the local endpoint, each remote signal associated with a remote endpoint of the one or more remote endpoints;

determining, at the local endpoint, a plurality of metric ratings, ratings by:

generating a metric vector for each signal of the plurality of signals; and

applying a function to each metric vector to generate a metric rating for

each signal, each metric rating reflecting an importance of a signal of the plurality of signals, the plurality of metric ratings comprising a local metric rating and one or more remote metric ratings, the local metric rating corresponding to the local signal, each remote metric rating corresponding to a remote signal of the one or more remote signals;

comparing the local metric rating and the one or more remote metric ratings; and

selecting a subset of the plurality of signals according to the comparison in order to manage the multicast conference call.

2. (Original) The method of Claim 1, further comprising:

mixing the remote signals of the subset of the plurality of signals; and

outputting the mixed remote signals of the subset of the plurality of signals.

3. (Original) The method of Claim 1, further comprising:

determining if the subset of the plurality of signals comprises the local signal; and

transmitting the local signal if the subset of the plurality of signals comprises the local signal.

4. (Cancelled)

5. (Cancelled)

DAL01-985768.1

ATTORNEY'S DOCKET NO.  
062891.1167

PATENT APPLICATION  
10/675,369

3

6. (Original) The method of Claim 1, wherein selecting the subset of the plurality of signals according to the comparison comprises:  
identifying a predetermined number of highest ranked metric ratings; and  
selecting the signals corresponding to the highest ranked metric ratings.

DAL01:985768.1

ATTORNEY'S DOCKET NO.  
062891.1167

PATENT APPLICATION  
10/675,369

4

(7.) (Currently Amended) A system for managing a multicast conference call, comprising:

one or more inputs operable configured to receive a plurality of signals at a local endpoint participating in a multicast conference call among the local endpoint and one or more remote endpoints, the plurality of signals comprising a local signal and one or more remote signals, the local signal associated with the local endpoint, each remote signal associated with a remote endpoint of the one or more remote endpoints;

the local endpoint including a metric extractor coupled to the one or more inputs, the metric extractor operable configured to determine a plurality of metric ~~ratings~~, ratings by:

generating a metric vector for each signal of the plurality of signals; and

applying a function to each metric vector to generate a metric rating for

each signal, each metric rating reflecting an importance of a signal of the plurality of signals, the plurality of metric ratings comprising a local metric rating and one or more remote metric ratings, the local metric rating corresponding to the local signal, each remote metric rating corresponding to a remote signal of the one or more remote signals; and

a comparator coupled to the metric extractor and operable configured to:

compare the local metric rating and the one or more remote metric ratings;

and

select a subset of the plurality of signals according to the comparison in order to manage the multicast conference call.

8. (Original) The system of Claim 7, further comprising an audio mixer operable configured to:

mix the remote signals of the subset of the plurality of signals; and

output the mixed remote signals of the subset of the plurality of signals.

9. (Original) The system of Claim 7, further comprising a transmission controller operable configured to:

determine if the subset of the plurality of signals comprises the local signal; and

transmit the local signal if the subset of the plurality of signals comprises the local signal.

062891.1167

PATENT APPLICATION  
10/675,369

5

10. (Cancelled)

11. (Cancelled)

12. (Original) The system of Claim 7, wherein the comparator is **operable**  
**configured** to select the subset of the plurality of signals according to the comparison by:  
identifying a predetermined number of highest ranked metric ratings; and  
selecting the signals corresponding to the highest ranked metric ratings.

ATTORNEY'S DOCKET NO.  
062891.1167

PATENT APPLICATION  
10/675,369

6

13. (Currently Amended) A computer-readable medium encoded with logic for managing a multicast conference call, the logic ~~embodied in a medium and operable configured~~ to:

receive a plurality of signals at a local endpoint participating in a multicast conference call among the local endpoint and one or more remote endpoints, the plurality of signals comprising a local signal and one or more remote signals, the local signal associated with the local endpoint, each remote signal associated with a remote endpoint of the one or more remote endpoints;

determine, at the local endpoint, a plurality of metric ratings; ratings by:

generating a metric vector for each signal of the plurality of signals; and

applying a function to each metric vector to generate a metric rating for

each signal, each metric rating reflecting an importance of a signal of the plurality of signals, the plurality of metric ratings comprising a local metric rating and one or more remote metric ratings, the local metric rating corresponding to the local signal, each remote metric rating corresponding to a remote signal of the one or more remote signals;

compare the local metric rating and the one or more remote metric ratings; and

select a subset of the plurality of signals according to the comparison in order to manage the multicast conference call.

14. (Original) The logic of Claim 13, further operable configured to:  
mix the remote signals of the subset of the plurality of signals; and  
output the mixed remote signals of the subset of the plurality of signals.

15. (Original) The logic of Claim 13, further operable configured to:  
determine if the subset of the plurality of signals comprises the local signal; and  
transmit the local signal if the subset of the plurality of signals comprises the local signal.

8

19. (Currently Amended) A system for managing a multicast conference call, comprising:

means for receiving a plurality of signals at a local endpoint participating in a multicast conference call among the local endpoint and one or more remote endpoints, the plurality of signals comprising a local signal and one or more remote signals, the local signal associated with the local endpoint, each remote signal associated with a remote endpoint of the one or more remote endpoints;

means for determining, at the local endpoint, a plurality of metric ~~ratings~~, ratings by:

generating a metric vector for each signal of the plurality of signals; and  
applying a function to each metric vector to generate a metric rating for each signal, each metric rating reflecting an importance of a signal of the plurality of signals, the plurality of metric ratings comprising a local metric rating and one or more remote metric ratings, the local metric rating corresponding to the local signal, each remote metric rating corresponding to a remote signal of the one or more remote signals;

means for comparing the local metric rating and the one or more remote metric ratings; and

means for selecting a subset of the plurality of signals according to the comparison in order to manage the multicast conference call.

20.

(Original) A method for managing a multicast conference call, comprising:

receiving a plurality of signals at a local endpoint participating in a multicast conference call among the local endpoint and one or more remote endpoints, the plurality of signals comprising a local signal and one or more remote signals, the local signal associated with the local endpoint, each remote signal associated with a remote endpoint of the one or more remote endpoints;

determining a plurality of metric ratings, each metric rating reflecting an importance of a signal of the plurality of signals, the plurality of metric ratings comprising a local metric rating and one or more remote metric ratings, the local metric rating corresponding to the local signal, each remote metric rating corresponding to a remote signal of the one or more remote signals, the plurality of metric ratings determined by:

establishing one or more metric values for a signal of the plurality of signals according to a metric appended to the signal;

determining a metric rating for the signal in accordance with the one or more metric values;

generating a metric vector for each signal of the plurality of signals; and

determining a metric rating for each signal of the plurality of signals in accordance with the metric vector for the signal by applying a function to each metric vector;

comparing the local metric rating and the one or more remote metric ratings;

selecting a subset of the plurality of signals according to the comparison in order to manage the multicast conference call by:

identifying a predetermined number of highest ranked metric ratings; and

selecting the signals corresponding to the highest ranked metric ratings;

mixing the remote signals of the subset of the plurality of signals;

outputting the mixed remote signals of the subset of the plurality of signals;

determining if the subset of the plurality of signals comprises the local signal; and

transmitting the local signal if the subset of the plurality of signals comprises the local signal.

10

21. (Previously Presented) The method of Claim 1, wherein determining the plurality of metric ratings comprises:

establishing one or more metric values for a signal of the plurality of signals according to a metric appended to the signal; and

determining a metric rating for the signal in accordance with the one or more metric values.

22. (Previously Presented) The system of Claim 7, wherein the metric extractor is **operable configured** to determine the plurality of metric ratings by:

establishing one or more metric values for a signal of the plurality of signals according to a metric appended to the signal; and

determining a metric rating for the signal in accordance with the one or more metric values.

23. (Previously Presented) The logic of Claim 13, **operable configured** to determine the plurality of metric ratings by:

establishing one or more metric values for a signal of the plurality of signals according to a metric appended to the signal; and

determining a metric rating for the signal in accordance with the one or more metric values.
